

Rep account signup — approval queue MVP

One shared promo code, gated by a restricted account state instead of a pre-built roster.

VacationPlaces · Travel Credits
Approvers: **Nico** / **Justin**

WHAT THE CODE DOES	WHAT ACTUALLY GATES ACCESS	WHY NO ROSTER
Routes a rep into the right program. It is not a secret and never decides who gets in.	The restricted account state. A leaked code buys an account with nothing of value attached.	Verification is absorbed by an approver who already knows the team, so launch isn't blocked on a list.

HELD UNTIL APPROVED

- Travel credits · no balance issued, no accrual
- Sponsored rate · standard pricing shown instead
- Booking · cannot transact
- ✓ **Available immediately:** profile, login, marketplace browsing — so a real rep isn't staring at a wall for a day.

REVIEW SIGNALS & CONTROLS

- **Claimed manager and office** — recognized or not, in about a minute. A leaker has to invent a name.
- **Soft flags sort the queue** — blank manager, odd hours, repeated IP. None auto-reject.
- **Code expiry and redemption cap** — set just above expected headcount, scoped to the onboarding window.
- **Full audit log** — email, claims, timestamp. Benefits are account state, so anything approved in error is downgraded after the fact.
