

Onsite rep enrollment — QR trip codes

VacationPlaces · Employee Store
Approvers: **Nico** / **Justin**

One trip-scoped code delivered by QR, capped at headcount and expiring on a clock. No codes typed, no codes handed out.

WHAT THE QR DOES Delivers the code so it is never typed . Removes typos, dead codes, and the distribution bottleneck.	WHAT ACTUALLY GATES ACCESS Scope, cap, and clock. A photographed QR is worthless by the afternoon .	WHY NO ROSTER The trip is the roster. Everyone in the room is verified by being in the room.	BACKSTOP Benefits are held until confirmed , so an overflow is caught before anything of value is issued.
---	--	---	--

PAIN POINTS REMOVED

- ✓ Mistyped multi-character codes — nothing is entered by hand
- ✓ Dead codes needing replacement — one live code per trip
- ✓ Queue at the front of the room — the whole group scans at once
- ✓ Abandonment before the next tour — under a minute end to end

CONTROLS ON THE CODE

- **Scoped to one trip** — not a company-wide code with a long life
- **Cap just above headcount** — 42 slots for 38 reps. People in the room scan first, so a forwarded link arrives to a spent code.
- **Automatic expiry** — a clock set at creation, never a task someone has to remember after the trip
- **Held benefits** — credits, employee rate, and booking stay off until the batch is confirmed

OPEN ITEMS TO SETTLE

- 1 **Who generates the code** — a per-trip handoff between Account Management and Creative will eventually break. Pre-generate a batch per quarter or make it self-serve.
- 2 **Cap and window defaults** — headcount + 10% and roughly two hours, unless a trip warrants otherwise.
- 3 **Where the manager field lands** — one extra field, only consulted when a trip's count comes back wrong.
